Art Unit

2612

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 19-26, 31-42 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☒ Claim(s) 19-26 is/are allowed.
- 6) ☒ Claim(s) 31-42 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on ____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. ____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Art Unit: 2612

DETAILED ACTION

Response to Arguments

1. Applicant's arguments filed on Feb. 12, 2004 have been fully considered but they are not persuasive.

Regarding claims 31, 35, 39 and 41, the Applicant alleged in page 5+ of the remarks that “Nothing in Ootsuka '754 shows, teaches or suggest a shooting mode in which both the moving picture and the still image is reproduced out of a moving picture which is recorded on a recording medium, and which is to be reproduced as a moving picture as claimed”, and the Applicant further alleged in page 8+ of the remarks that “nothing in Yoshimura '369 shows, teaches or suggests that the image plane is moving picture to be reproduced as a moving picture as claimed.”

In response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986).

In this case, it is cleared form the record that Ootsuka '754 clearly discloses the use of first recording medium, such as film or the IC card for recording the “still image” which is to be reproduced as a still image pictures and the second recording medium such as the magnetic recording medium (i.e., a magnetic tape 52) for recording a moving picture to be reproduced as a moving picture (i.e., see col. 6, lines 30+ and col. 14, lines 35+).

Art Unit: 2612

Furthermore, the Examiner noted that Ootsuka '754 does not explicitly stated that "the still picture is reproduced out of the moving picture which is recorded on the second recording medium to be reproduced as the moving picture" as recited in the present claimed invention.

However, the above-mentioned claimed laminations are well known in the art as evidenced by Yoshimura '369. In particular, Yoshimura '369 clearly teaches that it is conventionally well-known in the art to use a "second recording medium", such as a magnetic tape 112 as shown in Figs. 7 and 8 of Yoshimura '369, for recording/reproducing the moving image data (i.e., see col. 7, lines 40-45) so that the still image data may be reproduced out of the same recording medium (i.e., the magnetic tape 112) which is recorded on the recording tape to be reproduced as the moving picture (see col. 6, lines 35-45).

In view of the above, the Examiner asserts that possessing knowledge generally available to the skilled artisan as taught by Yoshimura '369, one skilled in the art would have been motivated to modify the system of Ootsuka '754 so that the still image data portion (i.e., as suggested in col. 6, lines 35+ of Yoshimura '369) may be selectively extracted and reproduced out of a picture recorded as a moving picture on the recording medium tape when the camera of Ootsuka '754 is placed in a particular mode, since Yoshimura '369 further suggested in col. 2, lines 35+ that such a modification would enable the operator to promptly grasp the desired still image data content from the recording medium having a large capacity thereby a high speed image data look up may be realized.

In view of the above, the Examiner's will maintains the rejections as follow:

Art Unit: 2612

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

2. Claims 31-33, 34-38 and 39-42 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ootsuka '754 (U.S. 5,774,754) in view of Yoshimura et al. (U.S. 5,761,369).

Regarding claim 31, Ootsuka '754 discloses a photographing apparatus (*see Figs. 2 and 18*) comprising:

a first recording section for recording, on a first recording medium (*i.e., noted the use of a silver salt film as shown in Fig. 4*), mainly still pictures together with information relating to the still pictures thus recorded (*as shown in Figs. 4 and 5A, it is noted that with the use of the*

Art Unit: 2612

magnetic recording circuit, the information relating to the still pictures recorded on the film may be recorded on a magnetic recording layer of the film so that such information may be used when a still picture recorded on the film is printed; see col. 7, lines 10+);

a second recording (*i.e., noted the use of Memory 50*) section capable of recording moving pictures and also pictures to be reproduced as still pictures (*i.e., col. 6, lines 30+); and*

a controller (Figs. 1 and 18, the elements 1 and 100) for controlling the photographing apparatus (*i.e., the system 20*), which is operated by a voluntary operation (*i.e., noted the use of manual switches as shown in Fig. 3 for allowing the user to perform a voluntary operation*) a plurality of shooting and reproducing modes (*i.e., noted that with the use of control units 1 and 100 and the input units, e.g., the elements 24-25, 39, & 40, the user may select among a plurality of shooting and reproducing modes; see col. 6, lines 29+ and col. 27, lines 20+), said shooting modes including a mode in which a still picture and information relating thereto are recorded on the first recording medium (see Figs. 4 & 5A, col. 6, lines 40+ and col. 7, lines 3+),*

a mode in which a moving picture is recorded on the second recording medium (50), and a mode in which a picture to be reproduced as a still picture is recorded on the second recording medium (*i.e., noted that both still/moving image signals generated by the image pickup device and signal processing unit have to record on the image memory unit 50, so that they may be reproduced to display on the display monitor; see Figs. 8, 12-13, 18 and 38, the elements 50 & 127; col. 15, lines 60+ and col. 27, lines 20+),*

Art Unit: 2612

said reproducing modes including a mode in which information relating to a still picture recorded on the first recording medium is displayed (*Figs. 13-14, col. 10, lines 45+, col. 12, lines 10+, col. 11, lines 20+ and col. 23, lines 40+*),

a mode in which a moving picture recorded on the second recording unit (50) is reproduced (*col. 15, lines 65+ and col. 28, lines 25+*),

a mode in which the still picture recorded on the second recording unit (50) is reproduced (*col. 32, lines 30-35*), and

a mode in which a still picture is reproduced (*i.e., Noted that during the "Preview" mode, the "STILL IMAGE" can be reproduced while the camera is in a motion recording mode; see col. 13, lines 50+, col. 27, lines 40+*) out of a picture recorded and reproducible as a moving picture on the second recording unit (*i.e., the memory device 50 as shown in Figs. 2 & 3*).

Further, although Ootsuka '754 discloses the use of "a second recording unit" for recording the motion image in the recording medium 52 and recording the still image in the recording unit 51, Ootsuka '754 does not explicitly show the use of particular "the still picture is reproduced out of the moving picture which is recorded on the second recording medium to be reproduced as the moving picture" as recited in the present claimed invention.

However, the above-mentioned claimed laminations are well known in the art as evidenced by Yoshimura '369. In particular, Yoshimura '369 clearly teaches it is conventionally well-known in the art to use a "second recording medium" (*i.e., noted the use of recording medium 112 as shown in Figs. 7 and 8 of Yoshimura '369*) for recording/reproducing the moving

Art Unit: 2612

image data (i.e., see col. 7, lines 40-45) so that the still image data may be reproduced out of the same recording medium (i.e., the tape 112) which is recorded on the recording tape to be reproduced as the moving picture (see col. 6, lines 35-45). In view of this, it is clearly well-known in the art that the still image data portion (i.e., col. 6, lines 35-45) may be selectively extracted and reproduced out of a picture recorded as a moving picture on the recording medium tape as desired by the user.

In view of this, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the system of Ootsuka '754 as taught by Yoshimura '369, since Yoshimura '369 suggested in col. 2, lines 35+ that such a modification would enable the operator to promptly grasp the desired still image data content from the recording medium having a large capacity thereby a high speed image data look up may be realized.

Regarding claim 32, Ootsuka '754 discloses wherein the information recorded on the first recording medium is information used when the still picture recorded on the first recording medium is printed (i.e., see col. 6, lines 60-col. 7, line 1 of Ootsuka '754).

Regarding claim 33, Ootsuka '754 discloses wherein, in any of the modes in which the moving picture is recorded, as aspect ratio of the picture can be varied (col. 23, lines 35+ and col. 24, lines 1+ of Ootsuka '754).

Regarding claim 34, Ootsuka '754 discloses a display for displaying the still picture, the moving picture, or information in any of the reproducing mode (i.e., see Figs. 12-17 of Ootsuka '754).

Art Unit: 2612

Regarding claim 35, please see the examiner's comment with respect to claim 31 as discussed above.

Regarding claim 36, please see the examiner's comment with respect to claim 32 as discussed above.

As for claim 37, please see the examiner's comment with respect to claim 33 as discussed above.

Regarding claim 38, please see the examiner's comment with respect to claim 34 as discussed above.

Regarding claim 39, please see the examiner's comment with respect to claims 31 & 33 as discussed above.

Regarding claim 41, please see the examiner's comment with respect to claim 31 & 33 as discussed above.

Regarding claims 40 and 42, Ootsuka '754 discloses wherein, a display for displaying a still picture, a moving picture, or information in any of the reproducing modes (see Figs. 12-17 of Ootsuka '754).

Allowable Subject Matter

3. Claims 19-26 are allowed for the reasons set forth in the previous Office action (please see paper no. 7 & 12).

Conclusion

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Aung S. Moe whose telephone number is 703-306-3021. The examiner can normally be reached on Mon-Fri (9-5).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wendy Garber can be reached on 703-305-4929. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
